## Topology

## Reminder - Todo List

Nom de tâche	ID	Dé but	Terminer	Durée
Déploiement de la maquette	1	15/03/2016	18/03/2016	4j
Prise en main de Ansible	2	15/03/2016	02/05/2016	49j
Créations de playbook et déploiement sur les serveurs	3	02/05/2016	14/06/2016	44j
Déploiement manuel d'une stack ELK	4	15/05/2016	29/06/2016	46j
Etablissement de l'Ansible	5	15/05/2016	29/06/2016	46j

#### What is an ELK stack?

```
elk/
                   defaults
                             — elk_options.yml
                  elasticsearch

    defaults

                                         lasticsearch_options.yml
                              tasks
                                        install_elasticsearch.yml
                  kibana
                            — defaults
                                         └─ kibana_options.yml
                              tasks
                                         └─ install_kibana.yml
                   logstash

    defaults

                                          └─ logstash_options.yml
                              - src
                                                        01-lumberjack-input.conf

    10-syslog.conf

    20-rsyslog.conf

                                                          30-output-stdout.conf
                                                  ca.pem
                                                 elk-cert.pem
                                                  elk-key.pem
                                      tasks

    install_logstash.yml
    install_logs
                  nginx
                                      defaults
                                         └─ nginx_options.yml
                               tasks

    install_nginx.yml

                  tasks
                     └─ install_elk.yml
  java/
   └─ install_java.yml
15 directories, 18 files
```

#### Tree installation

## DEMO

### Deliverable

- Some documentations : Ansible & ELK
- Install playbooks
- Rsyslog conf files
- Logstash groks
- Templates exemples (nginx, syslog, apache, ...)

## Blocking point

- Standardisation of the received logs (grok)
- Sizing of the hardware
- Relevant kibana dashboard

#### GitHub

 Progression is availaible on our GitHub at this link <u>https://github.com/Nodulaire/Ansible-ELK</u>
